

VC

VITALCARE HOSPITAL MANAGEMENT SYSTEM

One connected platform for modern healthcare.

Connect patients, clinicians, diagnostics, pharmacy, finance, inpatient care and management reporting in one coherent hospital workflow.

Product Overview

One patient record
Every department

The screenshot displays the Winslet patient record interface. At the top, the patient's name 'Winslet' is shown next to their ID 'MC-2026-00156' and gender 'Female'. Below this, the registration date '15/07/2026' is visible. The interface includes buttons for 'Edit', 'Appointment', and 'Walk-in'. A 'Billing' section shows 'Self-pay' and 'Encounters' with a count of '1'. A navigation bar at the bottom lists 'Encounters', 'Lab results', 'Radiology', and 'Dental'. The 'Activity timeline' section shows a list of events, including 'ENC-2026-00017' (Open) by 'Dr. Joselyn Ninsiima' and 'Patient registered' on '15/07/2026'. The 'Quick actions' section provides buttons for 'Book appointment', 'New consultation', 'Prescribe drugs', and 'Create invoice'.

Activity timeline

- ENC-2026-00017 Open Dr. Joselyn Ninsiima · Outpatient Department
- Patient registered 15/07/2026

Quick actions

- Book appointment
- New consultation
- Prescribe drugs
- Create invoice

A complete digital operating system for healthcare.

VC-HMS brings together front desk, clinical care, diagnostics, pharmacy, billing, inpatient services, administration and executive intelligence.

01

Unified patient record

A consistent longitudinal record across encounters, laboratory, radiology, dental, pharmacy and billing.

02

Department workflows

Focused workspaces help each team complete its responsibilities without losing patient context.

03

Operational visibility

Live statuses, queues, stock levels, bed availability and activity summaries support daily management.

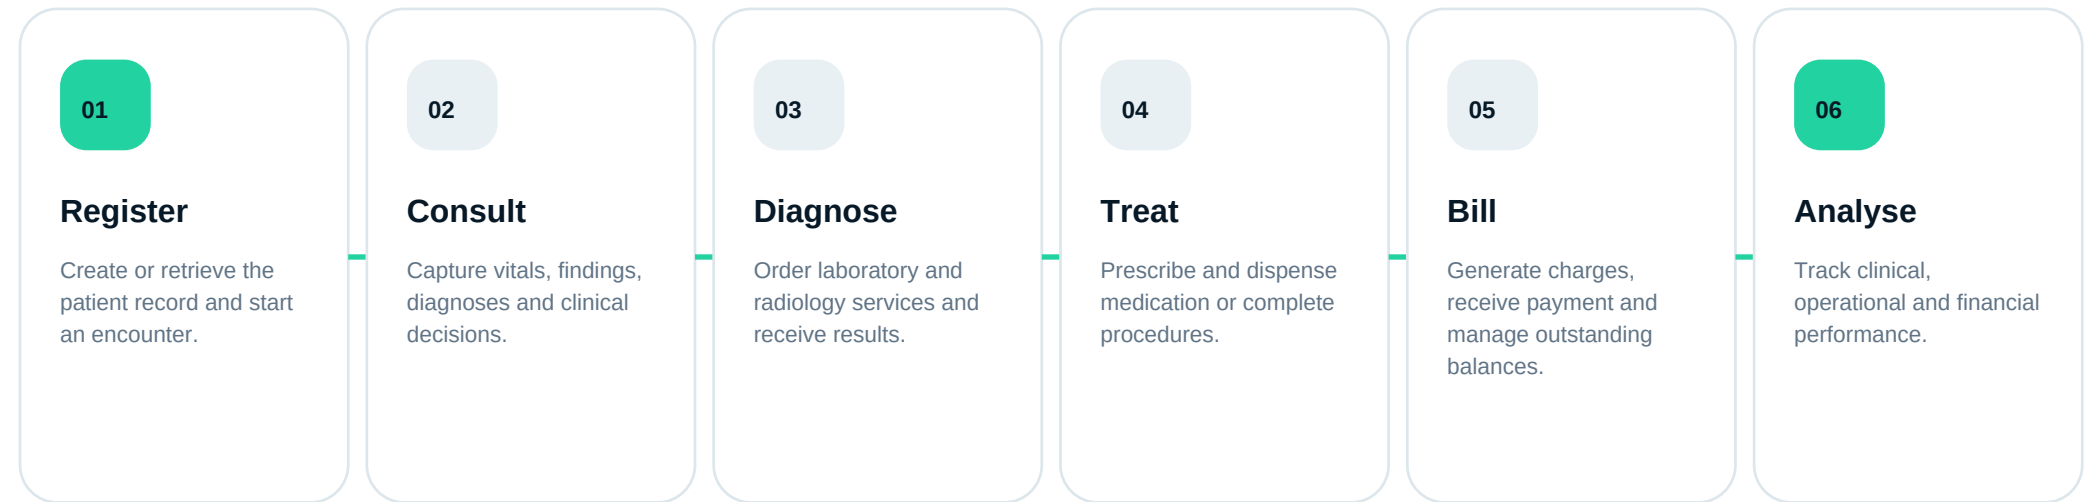

04

Financial accountability

Services, invoices, receipts, collections and management indicators remain connected to care delivery.

The screenshot displays the VC-HMS interface for a patient encounter. At the top, the patient's name 'Yiga JohnBosco' is shown along with the encounter ID 'ENC-2026-00020' and an 'Open' button. Below this, the 'Encounter progress' bar shows six steps: Consultation (completed), Lab ordered (2), Lab results (3), Prescribed (4), Dispensed (5), and Completed (6). The 'Clinical actions' section, titled 'what do you want to do next?', contains five buttons: 'Order lab tests' (No orders yet), 'Order imaging' (No orders yet), 'Log dental visit' (No visits yet), 'Prescribe drugs' (1 prescription(s), Done), and 'Close encounter' (Mark completed or refer). The 'Vitals' section shows four vital signs: Temperature 37.90 °C, Pulse 76 bpm, Blood pressure 120/79 mmHg, and O2 saturation 95.0 %. At the bottom, the patient's demographics are listed: Weight 79.00 kg, Height 160.00 cm, and BMI 30.90.

From registration to management reporting.

Appointments

Coordinate daily bookings, confirmations, check-in, cancellations and no-shows.

Faster patient flow

Keep schedules and status changes visible to reception and clinical teams.

Better clinical context

Bring patient information and next actions together in one workspace.

Consistent processes

Guide users through repeatable steps from consultation to completion.

Role-based access

Define which modules accountants, cashiers, doctors, nurses, laboratory teams, pharmacists, radiologists and administrators can access.

Administrative setup

Configure centres, currencies, clients, services, drugs, studies, expenses and other operational masters.

Data ownership

Your organisation retains control over its operational and clinical information.

Auditability

System activities can be designed for traceability and accountability.

Controlled permissions

Users receive access appropriate to their responsibilities.

A structured route from discovery to go-live.

1

Discovery

Confirm departments, workflows, reporting needs, users, integrations and deployment requirements.

2

Configuration

Set up the facility, modules, services, roles, price lists, workflows and required customisations.

3

Data preparation

Clean, validate and migrate agreed opening data, masters and balances.

4

Training and testing

Train users by role, complete scenario testing and resolve readiness gaps.

5

Go-live

Deploy the production environment, support cutover and monitor adoption.

6

Ongoing support

Provide issue resolution, refresher training, improvements and system health reviews.
